SER 402 Spring 2025

Documented work progress for Task #211 of US#183

- For this task, It will be just some adjustments to the collider for the VR Hands to make it more intuitive for the user to be able to grab small objects off the ground, due to it still being currently difficult to grab small items off of the ground from a certain position of the Mars Rock in the Mars Site #2 scene.
- (1/19/2025, 7:03PM): Just made sufficient enough changes to the VR hands collider that it was made more feasible to grab items off of the ground. There will be a playtest video showing the improvement of the object-grabbing.
- Playtest URL - <https://www.youtube.com/watch?v=mC4J3f8I6Tk>
